EMPLOYMENT HISTORY

Senior Web Developer, Elite Digital Agency   Toronto
Jan 2019 – Present

- Planned and structured applications based on client needs.
- Implemented and deployed REST API on Laravel. The API fetched dynamic data from Laravel application to a Magento Application.
- Setting up GIT repository and designing database architecture schema.
- Assigning, managing and guiding team members on their modular tasks and taking care of git merges and conflicts.
- Writing complex SQL queries for reports on Magento store which were not traditionally available.
- Coded custom backend dashboards using user authentication with roles and privileges.
- Reviewing submitted code, pushing it on staging environment, submitting it for QA and then deploying it to production. Took care of 50+ project deployments over last 5 months.
- Providing development estimations to Project Managers managing timelines over the course of the project. My responsibilities include resources management and managing time spent by junior developers.

Web Developer, Elite Digital Agency   Toronto
Sep 2016 – Jan 2019

- Core developer of events ticketing management system on Laravel for client which helped them sell tickets to their events. Before, client was using other paid platforms. Our application helped them save long term costs and boost their branding. Application supports fixed and percentage discounts.
- Sole developer of schools management system, where parents can register their kids. System takes care of deposit payments, connects with payment gateway,

creates payment card tokens and takes care of monthly installments. Over last 2 years, the application has collected more than one Million dollars.

- Designed and implemented a ticketing portal for huge client with 50+ active staff members. The application helped company staff members reduce the amount of back and forth emails and keep proper track of client requests. The application improved communication between client and staff by 100% and now their is a proper trail of tasks and its full visibility.
- Developed and launched Magento E-commerce stores which generated over two Million dollars in past 2 years.
- Developed contest websites for clients like PepsiCo with instant winners and distributed prizes in real time.
- Developed File interpretation system to connect Magento website with old legacy windows CRM system to dynamically manage products and customers. System is fully automated and reduced clients web product management by over 90%.
- Created Cron Job scripts that helped in cleaning old data files and archiving it for future use.

Web Developer (Freelance), RealBiz Realty   Toronto
Mar 2016 – Sep 2016

- Created WordPress website for client which helped in lead collection by 75%
- Integrated website with MailChimp for newsletter management, which improved client communication and satisfaction.
- Made multiple HTML landing pages for various smaller projects, which helped client in expanding his reach and creating awareness about this services and products.

INTERNSHIPS

Web Developer, Oxford Properties Group   Toronto
May 2016 – Aug 2016

- Improved user experience for 2000+ internal employees by optimizing code using reusable functions for an internal social networking application.
- Worked on C#.Net applications and helped in completing small modules
- Troubleshooted and fixed bugs and errors on previously build applications. Overall solved 20% of QA tickets.
- Remodeling Legacy web application and coded it from scratch to implement the new design in 2 months
- Collaboration with other intern developers to write modular code and merge each others work.
